Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on 3/16/09 has been entered.

### ***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on 3/16/09 was filed after the mailing date of the Notice of Allowance on 12/16/08. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

### ***Allowable Subject Matter***

3. Claims 47-98 are allowed.

4. The following is an examiner's statement of reasons for allowance: the prior art fails to disclose the recited combination of elements in a circuit including a compensation branch for reducing second order non-linear distortion in a receiver using a feed-forward technique, the compensation branch including a squaring circuit for receiving a received RF signal provided to an input of a mixer in the receiver and generating a squared version of the received RF signal; a

gain stage for receiving the squared version of the received RF signal and reproducing second order nonlinear distortion in the receiver, as in claim 47; the recited combination of elements in an integrated circuit having a receiver and a distortion reduction circuit for reducing second order non-linear distortion in the receiver using a feed- forward technique, the distortion reduction circuit including a squaring circuit for receiving a received RF signal provided to an input of a mixer in the receiver and generating a squared version of the received RF signal; a gain stage for receiving the squared version of the received RF signal and reproducing second order nonlinear distortion in the receiver, as in claim 81; the recited combination of elements in a circuit for reducing second order non-linear distortion in a receiver using a feed-forward technique, the circuit including a squaring circuit for receiving a received RF signal provided to an input of a mixer in the receiver and generating a squared version of the received RF signal; a gain stage for receiving the squared version of the received RF signal and generating unwanted second order nonlinear distortion in the receiver, as in claim 86; the recited combination of steps in a method of reducing second order non-linear distortion in a receiver using a feed-forward technique, the method including generating a squared version of a received RF signal provided to an input of a mixer in the receiver; reproducing unwanted second order nonlinear distortion in the receiver based on the squared version of the received RF signal, as in claim 91; and the recited combination of elements in an integrated circuit comprising a distortion reduction circuit for reducing second order non-linear distortion in a receiver based on feed-forward distortion cancellation, the distortion reduction circuit comprising: a squaring circuit for receiving a received RF signal provided to an input of a mixer in the receiver and generating a squared

version of the received RF signal; a gain stage for receiving the squared version of the received RF signal and reproducing second order nonlinear distortion in the receiver, as in claim 98.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
